

DELIVERING VALUE

through service

Our Vision

To become India's most respected
IT Services Company

Our Mission

Our mission is to offer products and solutions that meet international quality standards, backed by full lifecycle support, to bring substantial benefits to customers through lower total cost of ownership [TCO].

Core Values

To enhance "Customer Delight" by
"Delivering Value Through Service"

To continuously improve the software engineering processes towards achieving total quality management

To provide a work environment enabling innovativeness in products and services

To constantly provide state-of-the-art infrastructure and the best-in-breed technology solutions

About Accel Frontline

Accel Frontline Ltd is one of the leading IT services provider of end-to end solutions that includes consulting, IT infrastructure management, system integration, custom software development, and business process outsourcing solutions.

Established as Accel Automation Private Ltd in the year 1991 by five technocrats with more than 50 years of combined experience in the IT industry, Accel Frontline Limited has come a long way since then.

Given the growing opportunities in the hardware infrastructure solutions and system integration space, the company took over the computer manufacturing unit from Kothari group of companies in 1993 to provide system integration and product solutions.

In 1996 Accel forayed into software by setting up an application development center at Chennai. The company has expanded its operations to various parts of South India.

In 1997, the company decided to expand its service network all over india. This resulted in Accel acquiring a Delhi based company named Athreya Technologies and Industrial Development Private Ltd an offshoot of India Telecom Ltd, which provided a base for Accel in all major cities in North India.

In 1998, Accel acquired the services business of Network Ltd, a HCL Group company focusing in office automation products and services. This provided accel with a national footprint of 16 offices and 250 trained engineers. The company's turnover crossed USD 10 million in 1998.

In 1999, the company raised private equity from one of India's largest venture capital funds - ICICI Ventures. During this year Accel acquired the Systems and Engineering Services business of Fujitsu ICIM Ltd in India, india's largest IT Company. When the IT business of Accel Ltd was integrated as Accel ICIM Systems & Services Ltd.

During 2000, Accel crossed the USD 25 million turnover milestone and established itself as a leading enterprise IT services company ,with one of the largest network of offices in India. The company received strategic investment from Intel Capital.

During 2004, Accel forged a strategic alliance with Singapore based Frontline Technologies Corporation Limited (FTC) resulting to ACCEL FRONTLINE LTD.

FTC is a leading IT services company listed on the Singapore Exchange Main Board with a group turnover in excess of US\$ 200 million. Frontline has operations in five countries spread across ASEAN.

To enhance it's position as a leading IT infrastructure management and software services company, major initiatives were under taken to improve quality and process maturity across the organization, which resulted in securing ISO-9001 for the IT Services division and SEI CMMi Level 5 assessment for the Enterprise Software Division by 2004.

CREATING GROWTH

together

Our mission and objective is to help enterprises and governments boost performance, differentiate product and service offerings and enhance operational efficiency through the optimal use of information technology at every level.

Accel Frontline helps you to create opportunities, drive innovation and market expansion through a powerful combination of technomanagerial expertise and in-depth industry knowledge.

In keeping with the motto of "delivering value through service" Accel Frontline Ltd. endeavour to deliver highest quality solutions at the lowest TCO always.

MEETING YOUR BUSINESS

needs

Accel Frontline's IT consulting services are aimed at giving you the ability to choose from the best technology and implementation options available so as to achieve your business goals.

IT CONSULTING

Our experience in having worked with a diverse set of local and regional clients gives us enormous knowledge depth in the areas of IT infrastructure, Enterprise Applications, IT security and Outsourcing Consulting.

IT infrastructure Consulting

Our IT infrastructure consulting practice is built on the model of enabling the compliance of IT infrastructure and technology to attain corporate business objectives.

Accel Frontline helps in designing and development of a secure IT infrastructure that is highly reliable, available, scalable and optimal in performance. This includes helping you to achieve high availability business continuity, well-planned IT disaster recovery processes, service-level management and compliance with regulatory requirements.

Our consulting service covers:

- | Application Strobing
- | Enterprise network consulting
- | Data/Storage management
- | Disaster recovery
- | Applications infrastructure
- | Service level management
- | Strategyic IT development

IT Security Consulting

Accel's IT security consultants are experienced and certified professionals who help secure your information systems while providing a business-focused orientation. As part of the service, Accel Frontline provides security architecture consultation on the development of secured applications and enterprise systems.

Applications Consulting

Whether you need to integrate separate systems and existing applications to streamline and enhance operational efficiency, build a portal or web-based front-end for your business or customize applications to drive greater growth. Accel Frontline provides analysis and consulting for your business requirements. We also undertake independent 3rd party consultancy services and recommend the best-of-breed technologies and solutions for your needs.

Outsourcing Consulting

All companies, from small and medium sized businesses to large organizations, can benefit hugely from outsourcing.

The challenge, however, lies in the ability to leverage IT so as to gain and maximize company's competitive advantage.

Accel Frontline's experienced team of consultants help us to design outsourcing strategies that takes into account commercial considerations, location, delivery solution as well as human resources.

Sensitive to the unique needs of every organisation, Accel Frontline helps each client to understand the business imperatives, implications of outsourcing and devise a selection process for the suitable operations to be outsourced, besides working with clients on measuring the cost and performance requirements of outsourcing.

As part of total solution, accel Frontline helps to find / figure out the most suitable outsourcing partner for the business needs and manage the delivery of the outsourcing service.

OPTIMIZING IT

investment

Accel Frontline helps you to assess, build, deploy and optimize your IT infrastructure to drive business growth in a cost-effective manner.

IT INFRASTRUCTURE IMPLEMENTATION & INTEGRATION

Accel Frontline helps in handling exponential data growth, Consolidating and streamlining multiple servers sprawled across data centers, integrating software and hardware from different vendors, tackling security issues, and optimizing performance to improve service availability. Accel Frontline helps to assess, build, deploy and optimize the IT infrastructure to drive business growth in a more cost-effective manner.

Accel Frontline works with clients to ensure that their IT infrastructure provides a security-rich, available and recoverable environment providing the optimal performance you need.

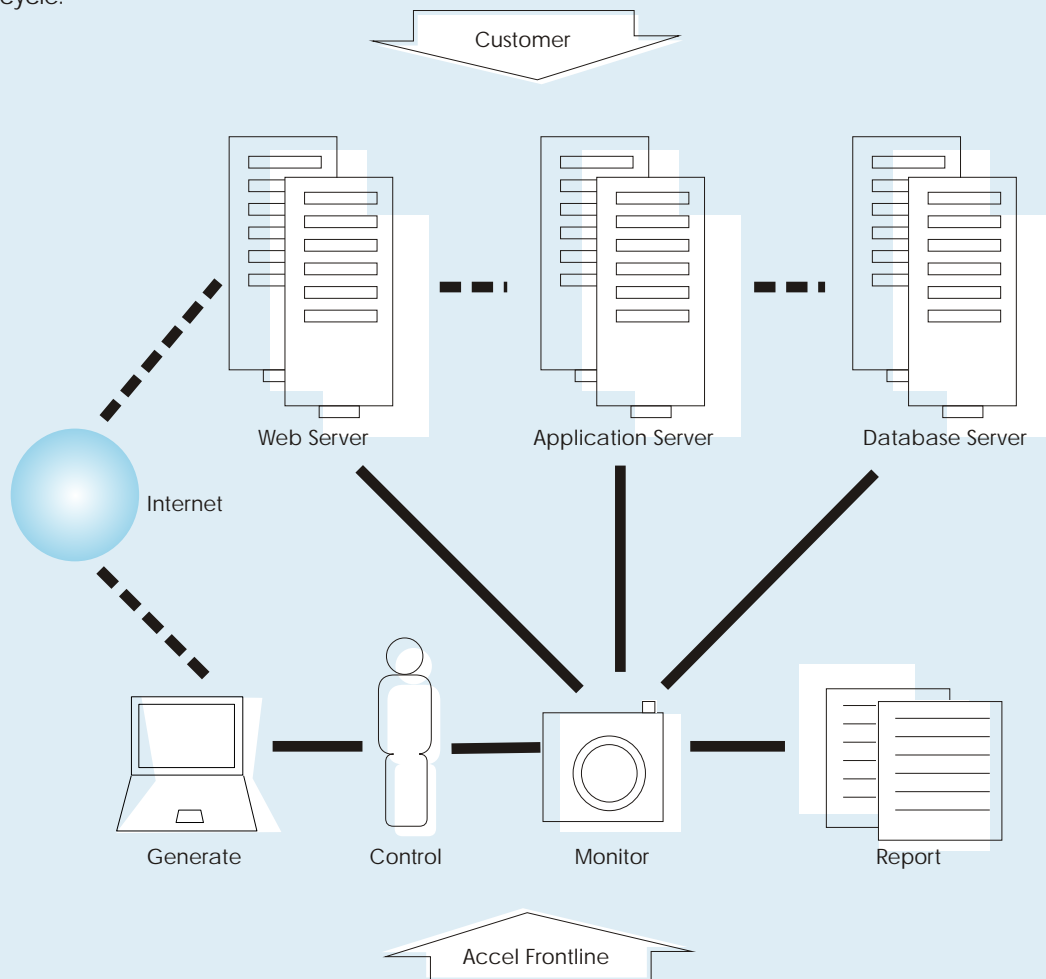

Accel Frontline's rich expertise in service delivery, project management, implementation methodology and quality assurance ensures smooth running of the infrastructure through out its life-cycle.

Application-Ready IT Infrastructure

Accel Frontline builds and deploys a operation ready IT infrastructure by implementing server hardware and OS using best practices from technology partners with application probing for IT infrastructure.

Accel Frontline helps to control network complexity and stave off technology obsolescence while managing an increasingly expanding network infrastructure.

Accel Frontline provides a complete suite of services from assessment and consultation to the implementation or upgrade of network infrastructure such as data center, disaster recovery, enterprise VOIP and campus wireless networks.

Accel Frontline's approach to ensuring that customers' applications are meeting the business requirements

Accel Frontline builds IT infrastructure that are operation ready, application-aware and security-rich.

Data/Storage Management

Managing today's data explosion and the need for regulatory compliance leads to galloping storage and back-up requirements. Accel Frontline helps to simplify and efficiently manage your storage environment while ensuring its integrity and performance. This is achieved with consolidating and networking storage to optimize IT resources while raising IT productivity and efficiency.

Accel Frontline designs and implements new storage architecture and conduct storage performance analysis and tuning. For total solution, Accel Frontline works closely with clients to plan data life-cycle management of data while keeping costs controlled with cost control Accel Frontline provides high-speed back-up and recovery with strategies and solutions for data recovery.

Disaster Recovery

In today's challenging business environment, access to information is key for a competitive edge and advantage. Customers demand up-to-date product and service information, employees require access to business-critical data, and regulatory agencies mandate the amount to time some businesses are required to get back online.

Accel Frontline has the services and expertise to ensure the continuity of IT supported processes by protecting, recovering and making available business-critical information in the event of a disaster. Accel Frontline designs and implements IT disaster recovery procedures and processes in a cost effective manner.

Applications Infrastructure Services

Accel Frontline builds and optimizes infrastructure for application performance and scalability to ensure that business applications can quickly roll out and are easily integrated in a cost-effective manner with security.

Our offerings include:

Enterprise Directory Services

Accel Frontline helps you to centralize directory services for easy management and to avoid duplication of resources across the enterprise.

Identity Management Infrastructure

Accel Frontline builds a solid infrastructure foundation to provide secure e-business environment.

Single point easy administration of resources to access all the corporate web applications is simplified and made convenient with a single sign-on feature.

Server consolidation/Migration

Accel Frontline can help in consolidating all applications, file/print, email, Web and database servers to avoid multiple underutilized servers that run only a single application or service and optimize IT infrastructure with the physical consolidation of many servers into one data center, or by integrating data center locations to get simplified management with improved availability with lower total cost of ownership.

Service Level Management

Service level management is a key element in any organization where the level of IT service needed to support the business can be determined and monitored.

Accel Frontline offers a single solution to monitor your IT infrastructure across networks, systems and applications. This service level manager solution helps to predict system behavior and performance, zeroing in on areas of improvement and optimize server performance.

This results in easy identification and analysis to find out the root cause of a problem within seconds instead of hours with absolute control over an increasingly complex IT infrastructure.

Accel frontline does load testing and conducting health checks on web infrastructure.

IT Strategy Development

Is your IT infrastructure aligned with the company's current and future business requirements?

Are your IT services meeting the corporate objectives?

Accel Frontline helps clients by assessing data center and IT environment

Accel frontline provides capacity planning to analyze current system load and predicts requirements for immediate future.

Solution Support

Companies who need an integrated approach in supporting their products and services from different vendors can tap into on-site solution support from Frontline. Accel Frontline's services include product deployment such as planning, assessment and configuration through system verification testing and production turn-up.

Enterprise Support Services

Accel Frontline provides a broad spectrum of maintenance and support for multi-vendor platforms-operating systems, servers, storage arrays and SAN (Storage Area Network) Fibre optic, Networks and Software.

Accel Frontline provides enterprise support for different operating systems such as Solaris, Linux, HP-UX,AIX and Windows 98 to 2003, XP and NT as well as various technology partners that include Sun Microsystems, Hewlett-Packard, IBM, Microsoft, Oracle, Symmantech, VERITAS Software, 3Com, Cisco, F5, Alcatel, Juniper and many more.

DRIVING

innovation

We help you build and integrate separate systems and applications to boost operational efficiency, enhance service delivery, drive innovation and market expansion.

ENTERPRISE APPLICATION SOLUTIONS

In today's fast paced business environment, relentless competition requires nimble and scalable solutions, often spanning organizational and geographic borders. Business needs to take advantage of and even exploit technology to meet current and new business opportunities.

Accel Frontline's Technology Solutions & Industry Practices provide optimal technology services for industry verticals such as the Manufacturing, Healthcare, Education, Banking and Financial Services and Government, in addition to delivering innovative technical solutions based on cutting edge technologies, as well as, traditional/legacy technologies.

Accel Frontline, with more than 15 years experience in providing complete, end-to-end IT solutions; offers industry & technology based solutions that are flexible to suit customer's needs completely, without being unduly expensive.

Accel Frontline's solutions can be broadly split into the following areas:

- ! Packaged Application Implementation Solutions
- ! Application Management
- ! Software Product Development
- ! Outsourcing solutions

Accel Frontline's CMMi Level 5 assessed process maturity and industry standard quality management system ensures that you always get to experience quality and performance in every software products and services delivered by us.

SOFTWARE PRODUCTS

IT Outsourcing Solutions

Business is changing today at a fantastic pace. Today's novelty is tomorrow's necessity. Given such a situation, businesses need to adapt quickly to changing market dynamics and customer needs and provide newer, innovative services and products on a regular basis.

Businesses need to first introduce changes to their existing IT landscape in order to be able to enable such business changes. For e.g. a bank, that wants to provide innovative business services such as ATM locators for its customers over mobile networks needs to integrate and communicate with a variety of technology platforms, both at the business partner level and with their own organization.

But, building such complex solutions, involving such varied technology platforms and standards, cannot be handled by the in-house IT departments of most enterprises.

This is where Accel Frontline's IT Outsourcing Suite of services helps your enterprise by providing a suite of services that encompass:

- ! "X"Technology - Custom Application Development services
- ! End-to-end IT outsourcing - taking over entire IT systems, including software and hardware, messaging infrastructure, etc.

Applications Management Outsourcing

Enterprises today typically run on at least three different technologies (source Forrester). Add to this, there are many different generations of the same technology, which makes smooth maintenance of the entire systems, a complex and veritable nightmare.

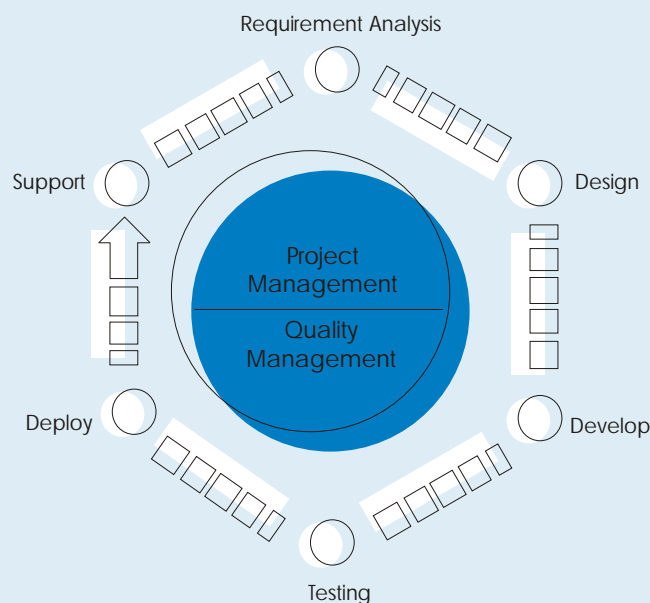

More and more enterprises are spending a major chunk of their IT budgets on ensuring these systems (mostly packaged applications and legacy/mainframe systems) run at optimal levels, at all times.

Given this scenario outsourcing the maintenance of these systems, or sometimes even complete management of these systems, would result in tremendous cost savings.

This is where Accel Frontline helps with its suite of Application Management Solutions.

Accel Frontline's Application Management Services Suite comprises of the following service menus:

- ! Packaged Applications - complete management of different ERP systems such as JD Edwards, SAP, Oracle, etc. - from high-end remote monitoring to maintenance & SLA based support on an ongoing Basis.
- ! Custom Applications Management of the entire application infrastructure of an enterprise.

Accel Frontline's holistic approach to implementing successful IT projects

Packaged Application Solutions

Packaged Applications or Enterprise Resource Planning or Commercial Off-The-Shelf (COTS) packages are firmly entrenched in most large enterprises and offer very focused solutions for specific industry verticals. But, configuring, deploying, developing and integrating it with existing application infrastructure, is a daunting task.

Accel Frontline has extensive expertise in configuring, deploying and maintaining these complex solutions. With extensive pool of industry experts who have at an average 10-12 years experience with at least 2 full scale, end-to-end implementations of ERP application such as SAP, Oracle, and JD Edwards makes Accel an ideal implementation partner for ERP and Packaged application development needs.

Our Packaged Application Solutions group offers the following solutions:

- ! Consulting
- ! Implementation
- ! Support
- ! End-to-end Outsourcing

Moreover, Accel Frontline have deep expertise in traditional integration technologies and platforms, such as Web Methods, Tuxedo, Vitria, TIBCO and SeeBeyond. This unique service mix allows us to provide the entire gamut of services from configuring, implementation, integration and maintenance of ERP applications.

Product Development

“Nothing can stop an idea who's time has come”, said Victor Hugo - one of the great thinkers' of modern era.

But a lot of great ideas have fallen by the wayside on lack of things like time to develop the product, bad timing at the market, inability to change with customer needs and market dynamics, and sometimes, a combination of all.

This is especially true with respect to the software product market. New versions, new features and new products are the lifeblood of the enterprise software industry.

To survive, startup and established companies have to bring products to market faster and this has led to more companies outsourcing their product development to third-party specialists skilled in software product engineering.

By leveraging Accel Frontline's outsourced product development expertise, clients can do just that - focus on developing idea, understand customer and their needs, without the associated costs of in-house product development.

Accel Frontline's different product development services are given below -

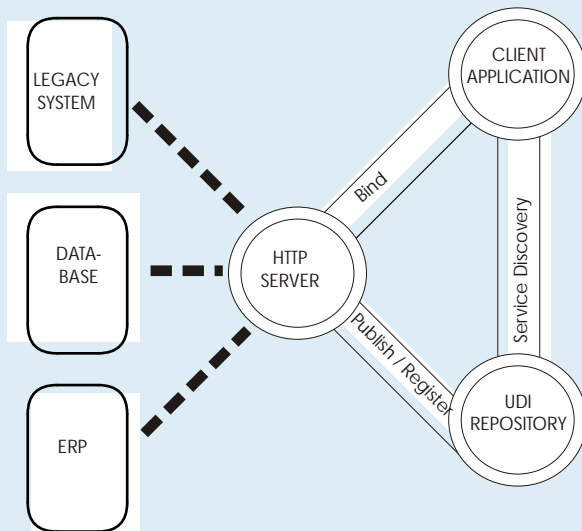

- ! IP Development - end-to-end Intellectual Property development services that includes embedded Software design and development, software engineering & maintenance, etc.
- ! Support and Maintenance - SLA based support 24 x 7 support and complete (adaptive, corrective, preventive, perfectfull) maintenance services.
- ! Testing Services - Automated and manual testing services, Quality Assurance.

SOA / Web Services

To effectively maximize disparate application and information sources, companies must ensure connectivity between these systems and enable the sharing of information between various applications.

Accel Frontline offers clients the capability to integrate the business tools more effectively. Through the Service Oriented Architecture (SOA) and web services paradigm, current and new system services can reach a wider audience without a lot of re-engineering.

Accel frontline services include streamlining your current business processes, re-engineering them if needed, enhancing efficiency and providing new business opportunities.

A typical architecture for a Web services solution

Wireless and Mobile Services

The wide adoption of wireless and mobile devices opens up new and exciting ways of reaching out to customers. At the same time, constant connectivity with customers and personalized services are needed to increase your competitive advantage.

Accel Frontline helps customers tap this huge market potential with solutions that enable secure and convenient transactions to be made with such devices.

Accel Frontline has a strong team of experts who can implement mobile solutions over a vast array of network and device standards such as WAP, XHTML, SMS, MMS and J2ME, while delivering customized information and services efficiently.

New Media Services

New media is defined as "All emerging communications media that combine text, graphics, sound and video using computer technology" (source: Nelson) which is the broadest possible description or definition of the term.

Thus new media pertains to everything connected to the online medium, be it simple text, video or audio output. New media includes Multimedia, Interactive Multimedia, Cross-media and the like.

Accel Frontline has a dedicated New Media Division that caters to different development needs in current, as well as, traditional media forms. Our services includes corporate identity design and development, creating customized applications such as flash based demos and web applications such as database driven web sites, full fledged Ecommerce sites and application user interface design.

Our Customer Experience team plays a significant and value-added role in every solution or system we build, focussing on how end users actually use, interact and work with systems.

Enhancing the Customer Experience

“ Humanizing” the technology!

Accel Frontline does not just build solutions and systems but ensures that these are usable for target users. Accel Frontline Customer Experience team plays a significant and value-added role in every solution or system we build, focussing on how end users actually use, interact and work with systems. This is what is usually referred to as “humanizing” the technology.

Customer Speak

“ Lufthansa ranked ACCEL's services as 'excellent' on all 12 parameters spanning response and resolution efficiency, competence and tech knowledge, delivery and quality of services. described the services as friendly, efficient and courteous. ”

*Mario Mascarenhas
General Manager
Lufthansa Airlines*

ENABLING BUSINESS

transformation

Every outsourcing engagement is about improving and streamlining processes for better, faster and more cost efficiently without compromising service levels

IT INFRASTRUCTURE MANAGEMENT SOLUTIONS

Accel Frontline enables clients to focus on core competencies through a comprehensive suite of outsourcing services. These include both IT outsourcing (applications and infrastructure management) and business process outsourcing. When linked as part of a transformational approach, Accel Frontline offers the much-needed flexibility for adapting to the changing business climate, potentially without incurring major investment dollars.

All offerings are encapsulated with strong service delivery management r focusing on governance, service quality, people and knowledge transition, as well as business value enhancement

In addition, Accel Frontline alliance network with industry leaders in IT infrastructure products, Networking, Security & Storage Solutions and Software products, provides clients with greater knowledge and capability to deliver on a global basis. Accel Frontline has partnered with almost all the leading companies in IT verticals that includes the likes of Sun Microsystems, Microsoft, Oracle, IBM, HP, Cisco Systems, Nortel Networks, Avaya, Veritas, CA and Network Associates.

Infrastructure Management

Accel Frontline take the responsibility to operate and manage client's IT infrastructure through infrastructure management service offerings.

Accel Frontline offers consistent service delivery to meet defined service level agreement (SLA) using skilled resources, established processes and effective deployment of technology.

Infrastructure management offerings:

Desktop and Distributed Services

Accel Frontline offers Service desk, service level monitoring and reporting, problem and incident management, desktop support services, asset management and IMAC (Install, Move, Add and Change) through desktop and distributed services.

Data Centre Facility and Services

Accel Frontline offers System operations, system administration, system performance and monitoring, media management, problem/change management, security and provisioning services.

Our data center has achieved BS7799-2:2000 certification for information management security through datacenter facility services.

Network Infrastructure Services

Accel Frontline offers LAN/WAN management, voice and data telecommunications, firewall management, intranet/Internet administration, and mobile/wireless services through network infrastructure services

Technical Support

Accel Frontline offers technical support services in disaster recovery, database administration, technology refreshes, capacity planning, network planning and design, storage design, systems migration, server build and deployment.

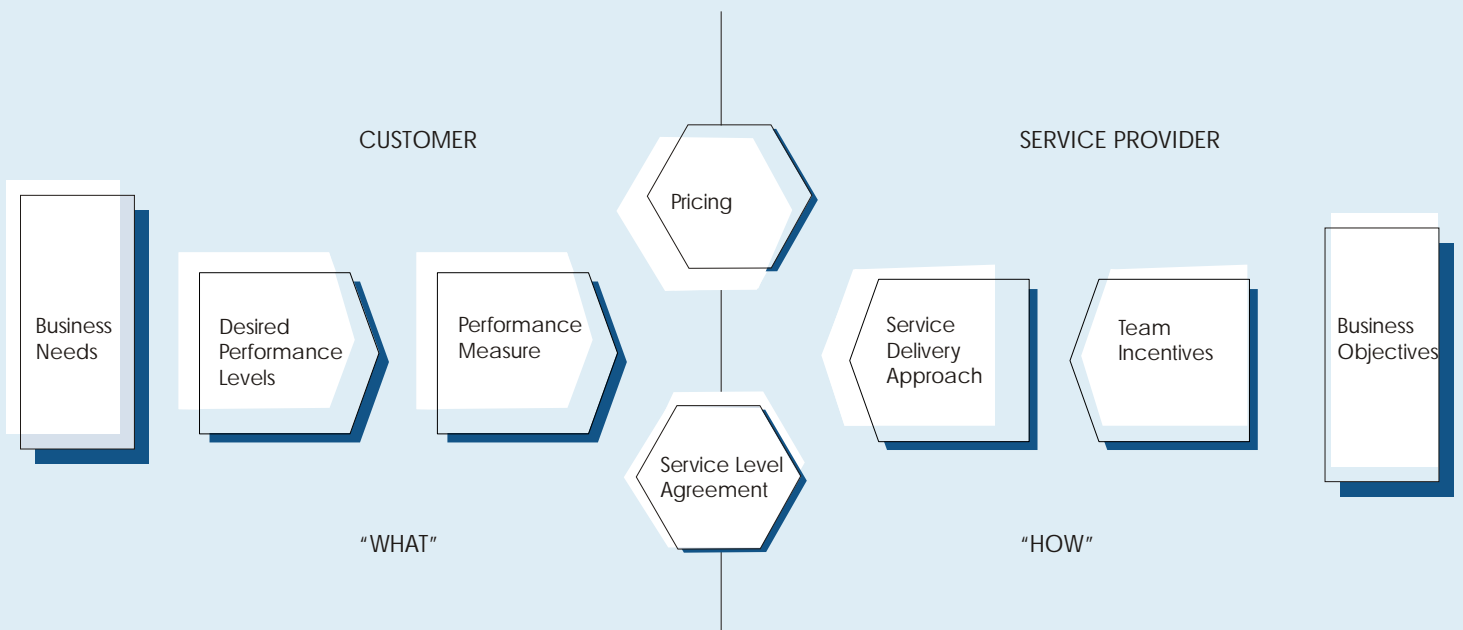

Challenges for many organizations have been to keep up with the technology evolution. As a result, the cost of running infrastructure often goes beyond a company's projection. Accel Frontline continues to stay abreath by renewing and upgrading skills , and by updating procedures to utilise the experience gained in engagements.

Five step process towards successful outsourcing

Our focus on governance, service quality, people and knowledge transition, as well as business value enhancement is a key differentiator in our outsourcing delivery.

An effective outsourcing relationship requires that key components are assigned.

IMPROVING

effectiveness

Accel Frontline's Business Process Outsourcing services helps IT companies improve their overall business effectiveness and broaden customer reach.

BUSINESS PROCESS OUTSOURCING

Accel Frontline offers the following services under its Warranty Outsourcing / BPO division. These services are aimed at providing IT hardware manufacturers with multi-location support in India for Warranty Fulfillment, Inventory Management, Technical Helpdesks and Maintenance Services - all under one umbrella.

- ! Warranty Fulfillment Services
- ! Inventory Management
- ! Technical Helpdesk
- ! Maintenance Services

Warranty Fulfillment Services

Accel Frontline has more than 15 years of experience in hardware systems services and is one of the premier systems integrators in India. Accel's Warranty Fulfillment services leverages our multi-location spread (in over 40 centers) with channel operations in conjunction with 100 partners to cover the entire Indian sub-continent.

Inventory Management

Accel Frontline's maintenance services is also capable of functioning as Logistics and Inventory Management hub for product companies and distributors who entrust the total ownership and responsibility on Accel to provide smooth and efficient end-to-end warranty services.

Technical Help Desk

Accel provides a comprehensive range of Voice/Web-based technology Helpdesk and customer care to help OEM's provide effective support for their technical products. Accel has a state-of-the-art contact center exclusively for these customers. Accel Frontline's Warranty Support Helpdesk has experienced supervisors to deliver services that consistently beats customer expectations.

Maintenance Services

Accel Frontline has vast expertise in doing component level repair of computer parts, sub-assemblies and peripherals for

- ! Computers and Peripherals
- ! Mobile phones and Hand held devices

Some of the leading IT and Telecom product OEM's utilize Accel Frontline's warranty outsource services for fulfilling their warranty delivery commitments.

THE "3PS" OF ACCEL'S SUCCESS

The primary reason for Accel Frontline's tremendous success lies in the way it leverage on the 3Ps,

- ! People
- ! Process
- ! Practices

People

Having founded the company with service as differentiator, Accel Frontline's core values center around people the lasting force behind the success.

This includes employees, partners and our customers. Accel Frontline's focus on people can be seen by the fact that it is among the Top 10 Indian IT employers, according to a survey conducted by DQ-IDC for two years consecutively (2004 and 2005)!

The most gratifying response to Accel Frontline's focus on people is the repeat customers. By focusing on "customer experience", Accel Frontline invariably ends up in getting repeat business and a first time customer becomes a life time client over a period of time

Process

Given the fact that majority of offshore IT projects run into problems such as cost creeps, metrics creeps, or time creeps. Accel Frontline has specifically addressed these issues by developing, implementing, evolving and following best practices in every activity that happens within the organization such as client handling, delivery milestones or employee counselling

Quality is at the center of everything at Accel Frontline be it internal processes (CMMi Level 5 for software division and ISO9001:2000 for service delivery helpdesk for the Infrastructure management group) or client handling (Accel Quality Framework, Offshore Application Development Methodology).

Practice

Being a technology services company, Accel Frontline has invested extensively in using technology from enhancing engineer's productivity to easing customer- partner communications and interaction.

Accel Frontline's systems are primarily aligned to cater all aspects of the company internal as well as, external. For employees, there is a comprehensive, web-based intranet facility (myaccel.com) that provides all possible information and help on company policies, news and events, schedules, practices etc.

The Accel Delivery Portal is a corporate extranet, that includes the customers and partner and is primarily a platform that provides transparency into the project development and management process. This ensures that customer's feel involved and can constantly monitor and track progress of their project anytime, anywhere in the world!

Accel Advantage

- ! Partnership approach: long term engagement with customers, ensures sharing a partner relationship, rather than the traditional customer-vendor relationship.
- ! Past Successes: with a proven track record in delivering end-to-end IT solutions for the past 15 years, across various industry verticals - Accel Frontline is the ideal partner for IT solution delivery.
- ! Offshore advantage: two development centers in India and with global presence ensures the most optimum distribution of the project activities and allows maximum leverage to the global development model.
- ! Best Practices: process-oriented approach ensures high quality delivery of solutions ontime, everytime!
- ! Technology centric: being a technology services company, ACCEL has invested extensively in using technology to enhance productivity to offer better value for customers.
